

Jain AI

AI that actually knows.

Document-Grounded Academic Assistant

ACADEMIC ASSISTANT

Made with GAMMA

The Problem: Information Overload

📄 Scattered Documents

University information is buried across dozens of PDFs, making it nearly impossible to find what you need quickly.

⏳ Time-Consuming Searches

Manual searching through unstructured documents wastes valuable student and staff time every day.

🤖 Unreliable Chatbots

Generic AI assistants hallucinate and provide inaccurate answers that cannot be trusted for academic decisions.

Our Solution: JainAI

Jain AI reads your institution's documents first, then delivers precise, trustworthy answers to student questions.

Solution

Jain AI is an intelligent academic assistant that helps students and staff find accurate information quickly by grounding every response in official institutional documents.

Objective

Deliver faster access to reliable answers, reduce manual searching, and improve confidence in academic decisions.

Ask in plain language

Natural language queries, no technical skills needed.

Get grounded answers

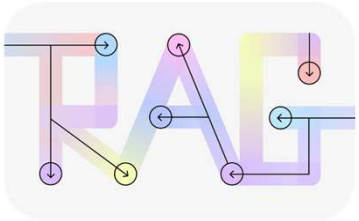

Every response is backed by real institutional documents.

Save time, reduce errors

Find accurate information in seconds, not minutes.

Core Features at a Glance

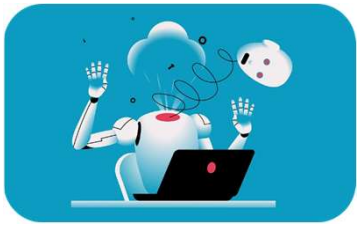

RAG + LLM Chatbot

Retrieves relevant document passages and generates accurate, context-aware responses using large language models.

OCR Capability

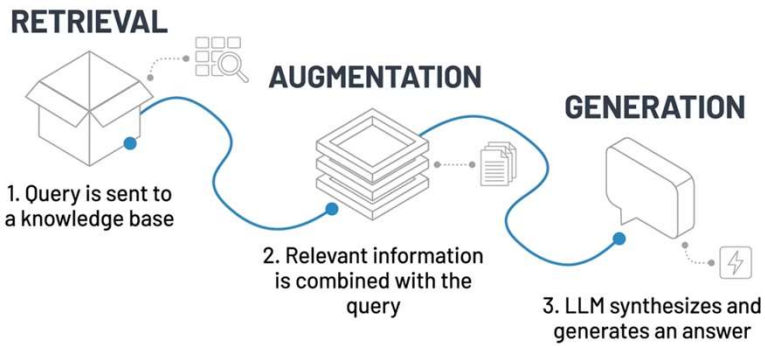

Extracts text from scanned PDFs and image-based documents, enabling real-world document handling at scale.

Zero Hallucination

Every answer is grounded in verified source documents — no guessing, no fabrication, fully traceable.

Made with GAMMA

FEATURE 1

RAG + LLM Chatbot

- RAG pulls useful information from documents
- LLMs turn that context into clear answers
- Improves accuracy with grounded sources
- Reduces hallucinations and guesswork

🔍 Retrieval

Finds relevant information from documents.

🧠 Augmented

Adds retrieved data as context.

💬 Generation

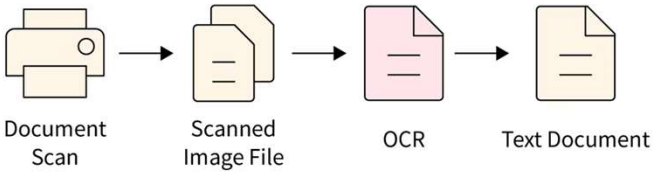

LLM generates the final answer.

Made with GAMMA

FEATURE 2

OCR Capability

Not all university documents are machine-readable. Jain AI's OCR engine extracts text from scanned PDFs, handwritten forms, and image-based documents — making every file searchable and queryable.

SCALER Topics

Scanned PDFs

Full text extraction from image-based PDFs.

Image Documents

Supports PNG, JPG, and other image formats.

Real-World Ready

Handles messy, real institutional document formats.

Made with GAMMA

FEATURE 3

Accurate, Verifiable Responses

Jain AI eliminates the biggest risk of generative AI: hallucination. Every answer is tied directly to source documents, giving students and staff confidence in the information they receive.

0

Hallucinations

Document-grounded retrieval eliminates fabricated answers.

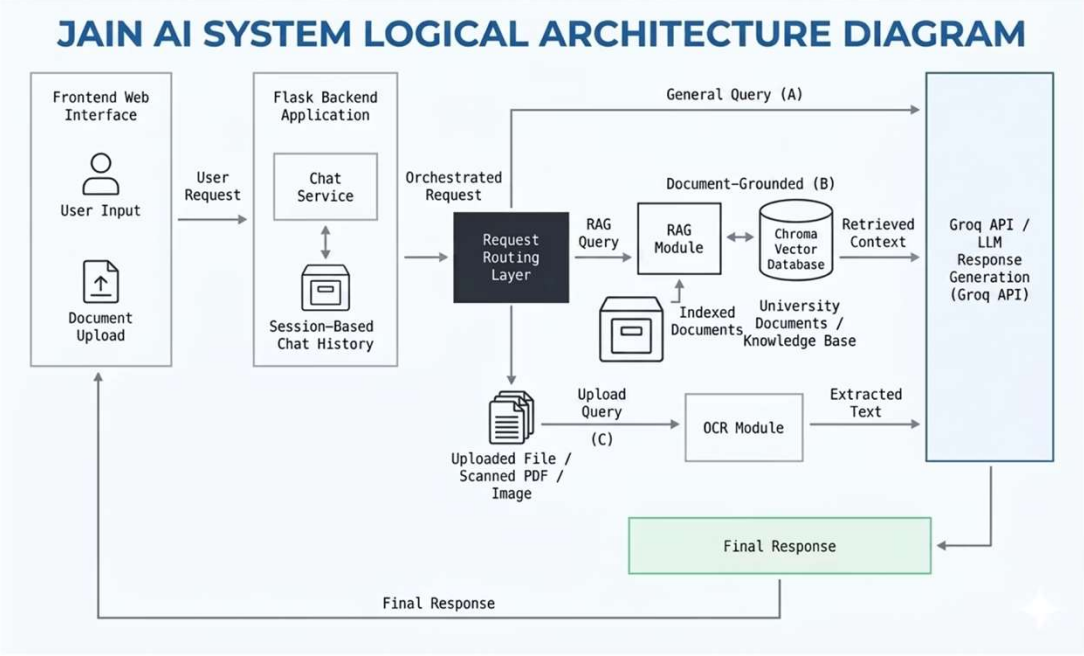

100%

Source-Backed

Every response is traceable to an original document.

Made with GAMMA

JainAi Architecture

The system routes queries, retrieves relevant data, and generates accurate responses.

Routing Layer: Processes and classifies user queries using Flask backend

RAG Pipeline: Retrieves relevant information from the vector database

OCR Module: Extracts text from uploaded PDFs and images

LLM (Groq API): Generates accurate, context-based responses

Routing → Retrieval → Generation

Made with GAMMA

Technical Stack

Jain AI is built on a modern, open-source stack designed for speed, scalability, and accuracy.

Python

Core backend language for all AI and data processing logic.

Flask

Lightweight web framework powering the REST API layer.

Groq API

Ultra-fast LLM inference for real-time response generation.

Chroma DB

Lightweight vector database for semantic document retrieval.

Hugging Face

Pre-trained embedding models for semantic text representation.

HTML / CSS

Clean, responsive frontend for the chat interface.

rag

Retrieves relevant document context to generate accurate, data-driven responses.

ocr

Extracts readable text from scanned PDFs and images for processing.

Made with GAMMA

Conclusion:

Jain AI helps students get accurate answers faster, save time on research, and avoid the risks of hallucinations.

1

Accurate Answers

Grounded in trusted documents so students can rely on every response.

2

Saves Time

Find the right information quickly and spend more time learning.

3

No Hallucinations

Responses stay focused, clear, and aligned with the source material.

4

Why It Matters

Give every student a smarter, more confident way to learn and succeed.

Made with GAMMA

Thank You

For your time and attention. We look forward to transforming academic information access with Jain AI.
